Document Title: S	pecification of Kavach (The Indi	an Railway ATP)- Onboard KAVACH C	Configurable Parameters
			-Annexure-A2

#### A2.1 Introduction

This annexure describes the KAVACH Onboard configuration parameter requirement data with system related limitation that characterise the implementation of KAVACH Onboard subsystem.

## A2.2 Scope

This document defines the Onboard configuration parameter requirement data with onbaord system related.

In order to properly set the Indian Railway KAVACH onboard. Values for braking curves, it is necessary to define the conditions under which the nominal emergency brake deceleration and build up time are determined for the rolling stock with type of type of onboard.

## A2.3 Onboard KAVACH Configurable Parameters

The configuration parameter mentioned in this annexure are indicative only. Software development may consider these parameter.

#### A2.3.1 OnboardKAVACH Configurable Parameters

S.no	Parameter	Description	Default	Min	Max	Units
1.	SOURCE_STN _ILC_IBS_VER SION	Executive software version field	2	1	7	Number
2.	Locomotive /Self Propelled Unit ID	Locomotive or self Propelled Unit Unique ID	LD¹	0	999999	Number
3.	Loco/Self Propelled Unit Max Speed	Max Speed of Lo- comotive or self propelled Unit	LD	0	510	kmph
4.	Loco/Self Propelled Unit Wheel Dia(D1)	Wheel diameter in mm	LD	640	1220	mm
5.	Loco/Self Propelled Unit (D2)	Wheel diameter in mm	LD	640	1220	mm
6.	RFID Reader - 1 OFFSET in FRONT		3	0	20	Meter

<sup>&</sup>lt;sup>1</sup> LD means Locomotive or self Propelled unit dependednt

ISO 9001: 2015	Effective from 05.07.2022	RDSO/SPN/196/2020	Version 4.0 d3 Amdt-1	
Document Title: Specification of Kavach (The Indian Railway ATP)- Onboard KAVACH Configurable Parameters				
			-Annexure-A2	

- A2.5 The Onboard KAVACH and BIU needs to be installed as per the RDSO approved pre-commissioning checklist in the shed. After completion of the installation, proper functioning of the Onboard KAVACH shall be ensured by moving the locomotive in the shed itself.
- A2.6 Based on the request from Zonal Railways, S&T Directorate of RDSO should provide the information detailing braking characteristics for the type of trains, upto the maximum permissible train speed as represented in the figure A2.1 as obtained from Rolling stock directorate.
- A2.7 Based on the this table, train configuration parameters are to be derived afterconducting trials for various formations.
- A2.8 If the train configuration parameters are not approved, then the loco shall betaken for a single trial as per configuration given in the table below in the nominated proven block sections and braking parameters shall be acquired. Further, the SAT of this locomotive shall be conducted as per SIF No.0524. The trials for 10 trips with these updated braking parameters shall be carried out for each train configuration.

#	Category	Train Configuration
1.	LE for new type of locos	As specified by user Railway
2.	Passenger	ICF type and LHB coaches
		Passenger train 21 to 27 coaches
		Passenger train 14 to 20 coaches
		Passenger train 8 to 13 coaches
		Passenger train 3 to 7 coaches
		Any other type of configuration
		as specified by user Railway
3.	Goods	GOODS –56 EMPTY
		GOODS –BOXN 4000 To 5000 TON
		Any other type of configuration
		as specified by user Railway.

- A2.9 The acquired braking characteristics shall be updated in the Onboard KAVACH configuration manual of the OEMs and send the same to S&T Directorate of RDSO along with SAT and trial reports for approval.
- A2.10 The configuration files shall be made separate for each type of locomotive, so as to maintain uniformity from Loco Pilot point of view.
- A2.11 If the train configuration is already approved, trials up to five trips and SAT at nominated trial section to be conducted to the satisfaction of OEMs.
- A2.12 Further, OEMs shall issue the certification to PCEE & PCSTE's of Zonal Railways, stating that the Onboard KAVACH is properly installed and can be made available for services on Indian Railways.
